

Contents

| | | |
|----------|--|-----------|
| 1 | Introduction | 4 |
| 1.1 | Motivation | 4 |
| 1.2 | What is causality and why do we care? | 5 |
| 1.2.1 | Defining causality | 6 |
| 1.3 | Identifying when we have a causal problem | 6 |
| 1.4 | Approaches to causality | 9 |
| 2 | Causal models | 11 |
| 2.1 | Causal Bayesian networks | 11 |
| 2.2 | Counterfactuals | 16 |
| 2.3 | Structural Equation models | 19 |
| 2.4 | Comparing and unifying the models | 21 |
| 2.5 | What does a causal model give us? Resolving Simpson's paradox | 22 |
| 3 | Two key questions | 25 |
| 3.1 | Causal effect estimation | 25 |
| 3.1.1 | Independence in bayesian networks: D-separation | 26 |
| 3.2 | The Do Calculus | 28 |
| 3.2.1 | Identifiability | 30 |
| 3.3 | Estimation | 31 |
| 3.3.1 | Defining causal effects | 31 |
| 3.3.2 | Estimating causal effects by adjusting for confounding variables | 32 |
| 3.3.3 | Does causal effect estimation work | 37 |
| 3.4 | Causal Discovery | 37 |
| 3.4.1 | Conditional independence based methods | 38 |
| 3.4.2 | Discovery with functional models | 42 |
| 4 | The interventionist viewpoint | 45 |
| 4.0.1 | The role of randomisation | 45 |
| 4.1 | Multi armed bandits | 46 |
| 4.1.1 | Regret | 47 |
| 4.1.2 | The exploration/exploitation trade-off | 48 |
| 4.1.3 | Key approaches and results | 48 |
| 4.1.4 | The need to add structure | 49 |
| 4.1.5 | Key related settings | 50 |
| 5 | Causal Bandits: Unifying the approaches | 52 |
| 5.1 | The framework | 52 |
| 5.2 | Causal bandits with post action feedback | 54 |
| 5.2.1 | Notation | 54 |
| 5.2.2 | Definition of causal bandit game with post-action feedback | 55 |

| | |
|---|-----------|
| <i>CONTENTS</i> | 3 |
| 5.2.3 The parallel bandit problem | 55 |
| 5.2.4 General graphs | 57 |
| 5.2.5 Experiments | 59 |
| 5.2.6 Additional experiments | 60 |
| 5.2.7 Discussion & Future work | 62 |
| 5.2.8 Proofs | 63 |
| 6 Conclusion | 68 |
